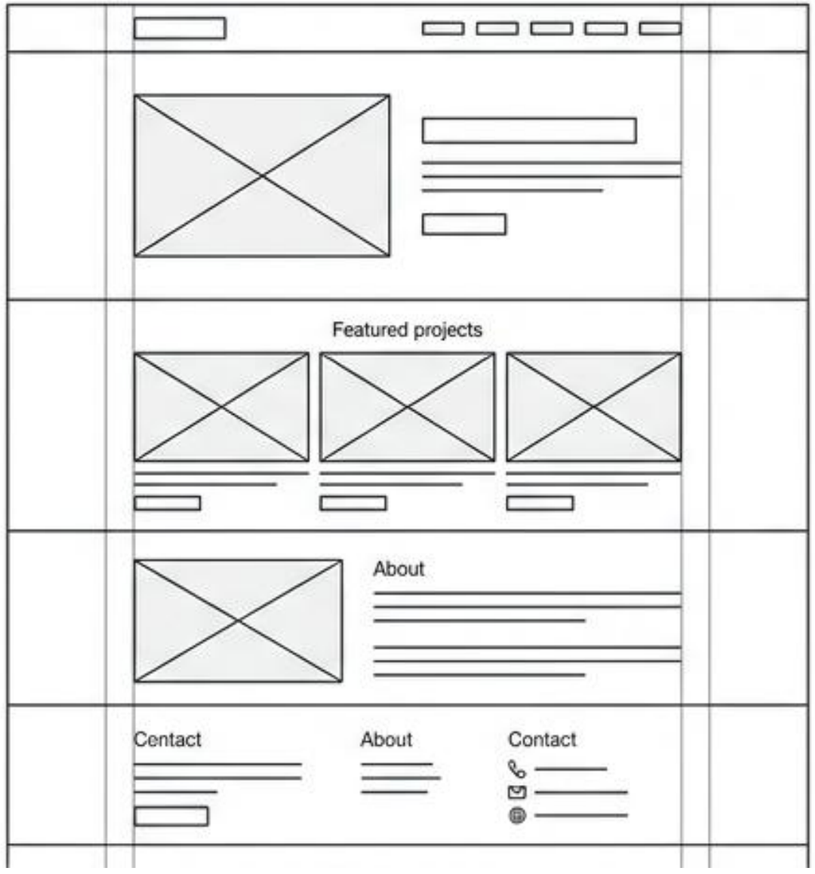
Engineering a Dynamic Web Portfolio

A purpose-built front-end application.



Native Web Tech

HTML, CSS, JavaScript

Architecture Scope

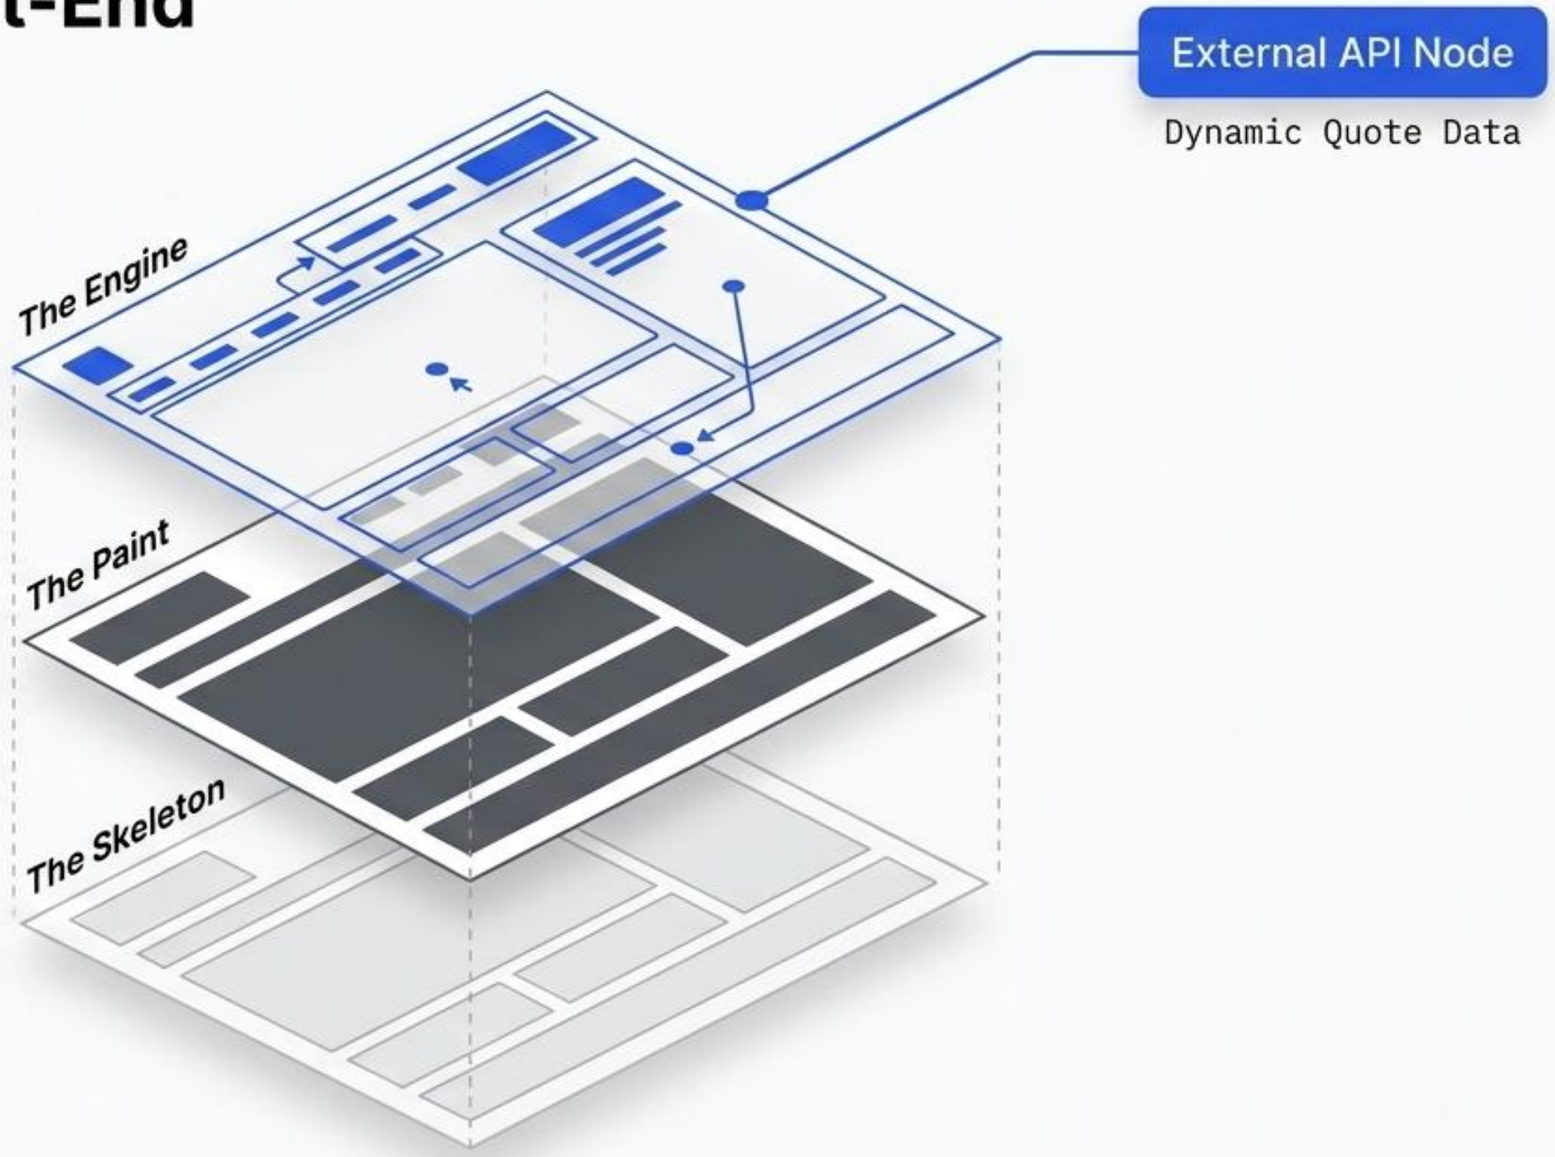
Home, About, Projects, Quote, Contact

Core Goal

Responsive, highly interactive professional design.

NotebookLM

A Three-Pillar Front-End Architecture



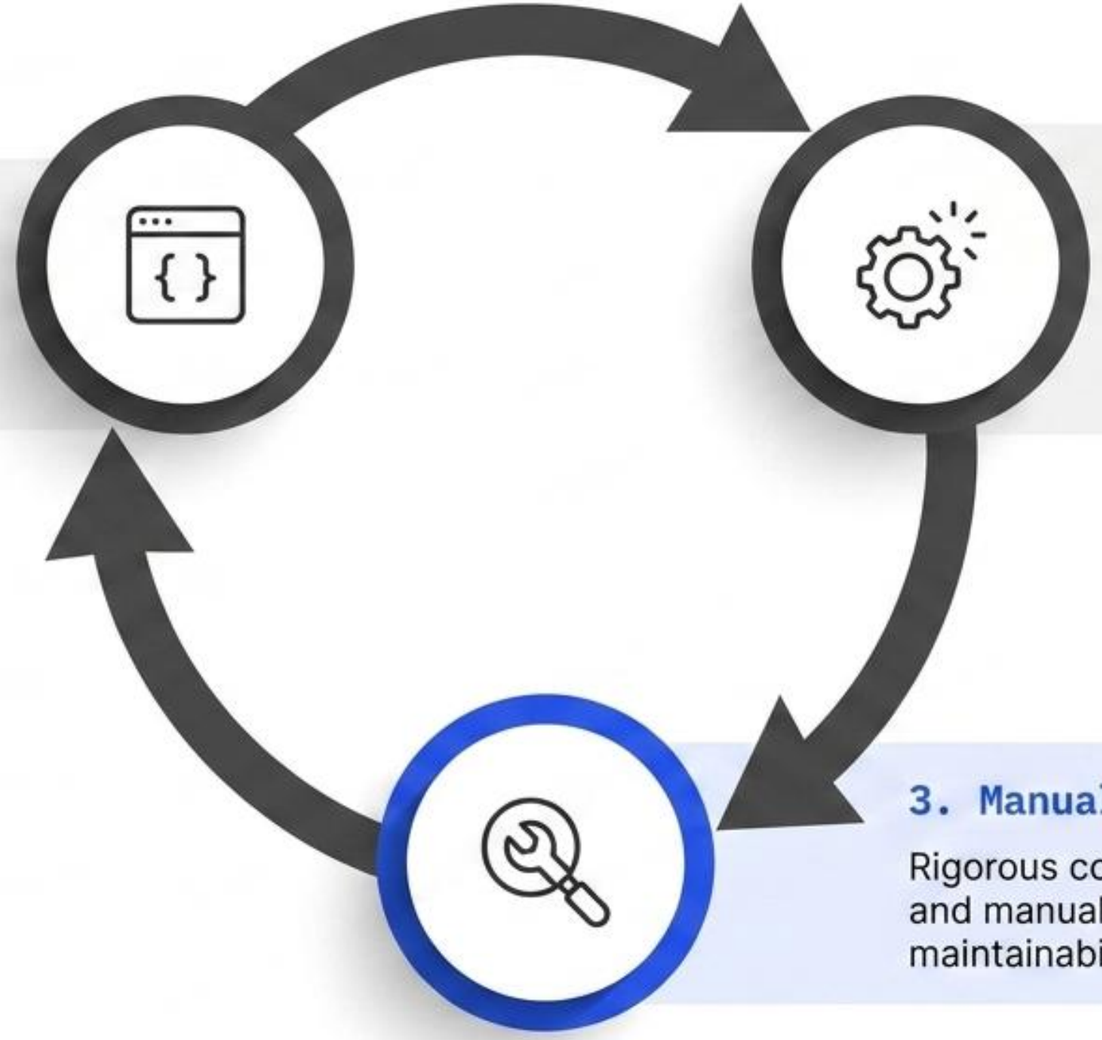
`script.js`
Interactivity, state management, DOM updates.

`styles.css`
Design system, theme variables, responsive layouts.

`index.html`
Semantic page structure and accessibility.

NotebookLM

The Hybrid Development Loop



1. Structural Build

Writing the foundational codebase and defining logical requirements.

2. AI-Assisted Acceleration

Targeted debugging, logical explanations, and complex refinement.

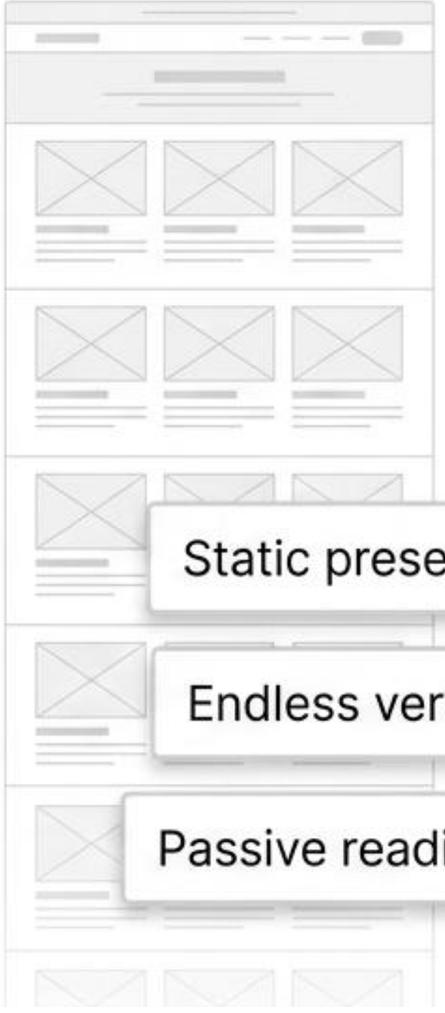
3. Manual Polish

Rigorous code review, testing, and manual adjustments for maintainability.

NotebookLM

Rethinking the Static Project Gallery

Traditional Portfolios

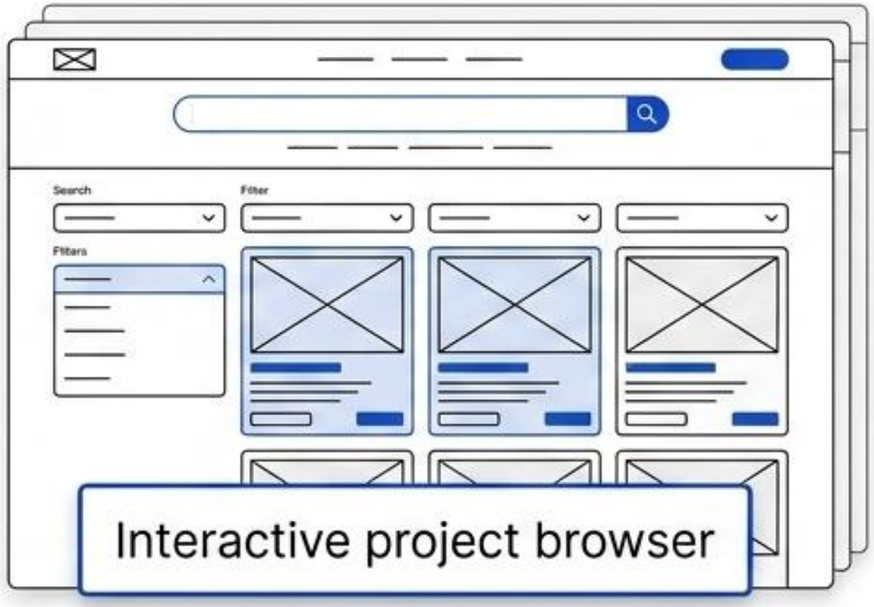


Static presentation cards

Endless vertical scrolling

Passive reading experience

This Application



Interactive project browser

Dynamic filtering and sorting

Active content discovery
